

Project - Build a Student Grade & Honor Roll Tracker.....	1
Task 1: Read messy Student Names from user	Error! Bookmark not defined.
Task 2: Request user to input Math and Science grade and calculate the average.....	Error! Bookmark not defined.
Task 3: Scale Up to a Full Schedule.....	Error! Bookmark not defined.
Task 4: Clean the Main Architecture (Introducing Multiple Functions).....	Error! Bookmark not defined.
Task 5: OOPs concepts – class, encapsulation	Error! Bookmark not defined.
Task 6: OOPs concepts – Data hiding.....	Error! Bookmark not defined.
Task 7: OOPs – Inheritance and overriding	Error! Bookmark not defined.
Task 8: OOPS – Polymorphism	Error! Bookmark not defined.
Task 9: File Input Output	Error! Bookmark not defined.
Task 10: Read back from on start-up.	Error! Bookmark not defined.

Project - Build a Student Grade & Honor Roll Tracker

This project bridges your fundamental knowledge (I/O, logic, and functions) with the next set of essential Java concepts: **Strings, Arrays, Wrapper Classes/Type Casting**, and **Basic Classes/Objects**, inheritance and Polymorphism.

The Goal

Build an application that reads a student's raw data string from user.

Extracts their numeric grades into an array, calculates their average, and generates an automated report profile card.

This UnifiedTracker.java step-by-step evolution of GradeTracker application.
